

# **Quartz Measuring Tongue**

# for mold cavity pressure

Quartz Measuring Tongue Type 9221 for measuring cavity pressure in injection molding of plastics and die casting of metals. The pressure is measured indirectly via a measuring or an ejector pin. The sensor can be used with several tools by simply changing it.

- Force range 0 ... 10 kN
- Easy repositioning in different molds
- Exchangeable coaxial cable
- Corrosion-resistant

# Description

The cavity pressure is transmitted by a measuring or ejector pin to the convex force-sensisitive face of the sensor. The quartz element yields an electric charge proportional to the force, hence proportional to the pressure.

The large measuring range of the sensor allows to use pins of any usual diameter (up to 14 mm) without danger of overload.

All parts of the measuring tongue are corrosion-resistant. The exchangeable cable is screwed tight on the sensor. The Fischer connector is selflocking and splashwater-proof

# Application

- in tools which already have been hardened or which do not offer enough space for a directly measuring sensor.
- temporary equipping of a tool for measuring cavity pressure, e. g. for optimizing the gate profile or the machine settings.

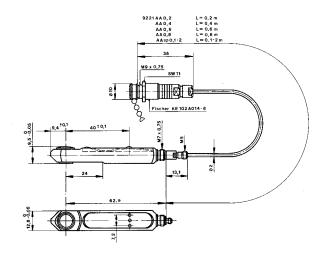

# Installation

The measuring tongue is inserted with the extracting tool Type 1315A into the prepared and thoroughly cleaned slot. The tongue must be positioned precisely to assure that the force is acting in the center of the sensor.

The cable connector of the tongue can be fixed with the mounting plate Mat. No. 65005208 (Fig. 1).

#### Technical data

Measuring range	kN	0 10
Overload	kN	12
Treshold	N	<0.01
Sensitivity	pC/N	-3.3
Linearity, also for partial ranges	%/FSO	≤±1
Hysteresis	%/FSO	≤1
Rigidity, mean value	N/µm	≈160
Natural frequency	kHz	≈60
Operating temperature range	°C	-50 200
Temperature coefficient	%/°C	-0.02
of sensitivity		
Temperature error	N/°C	<±5
Capacitance (with cable Type 1645C0,4)	pF	≈200
Insulation resistance		
at 20°C	ΤΩ	≥10
at 120°C	ΤΩ	≥1
Weight (without cable)	g	160

1 N (Newton) = 1 kg · m · s<sup>-2</sup> = 0.1019... kp = 0.2248... lbf; 1 kgf = 9.80665 N; 1 inch = 25.4 mm; 1 kg = 2.2046... lb; 1 Nm = 0.73756... lbft

#### Cable variants

The following synopsis gives an overlook on possible cable connections between sensor and charge amplifier.

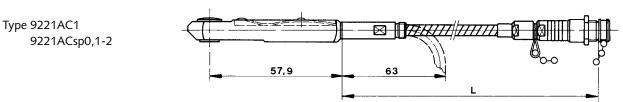

Measuring tongue with high temperature connecting cable Type 1645C... (Teflon, ø2 mm)

Measuring tongues with standard cable, length 0.2, 0.4, 0.6, 0.8 m (or special lengths from 0.1 to 2 m)...

# Measuring tongue with high temperature connecting cable Type 1649A...

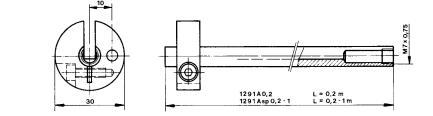

(in metal tubing)

Measuring tongues with high temperature connecting cable, in metal tubing, length 1 m (or special lengths from 0.1 to 2 m).

#### Extraction tool

Type 1291A0,2 1291Asp0,2-1

Extraction tool, standard length 0.2 m (or special lengths from 0.2 to 1 m).
