

Revolutionizing biomechanical measurements – digital force plate technology from Kistler

The digital transformation in sports, research and motion analysis is here! Now, high-precision piezoelectric measurement technology from Kistler comes equipped with state-of-the-art digital electronics. It's a win-win situation: piezoelectric technology gives you data of the highest quality – even for the most complex biomechanical measurements. What's more: digital technology means you can be sure that no information is lost during data acquisition, and the very smallest differences can be detected.

Benefits of our digital technology:

- Highest measurement resolution in the biomechanics sector (24-bit data acquisition per channel)
- PTP (Precision Time Protocol) synchronization within microseconds
- Simple cable concept
- Unlimited number of force plates can be synchronized
